

CLAIMS

I claim:

1. A revolving slide comprising:
 - (a) A support rail constructed from two or more upright support
5 and two or more horizontal guiding support rail rails.
 - (b) A vertical slide mechanism with at list one roller member
mounted on support rail and adapted for vertical motion
relative to support rail.
 - (c) A horizontal slide mechanism with at list one telescopic
10 member mounted on the vertical slide mechanism and
adapted for horizontal motion relative to support rail
 - (d) At list one shelf support mounted on the horizontal slide
mechanism.
- Wherein said the combination of vertical slide mechanism and the
15 horizontal slide mechanism permit shelf support to be repeatedly
repositioned in an upward and downward manner relative to the
support rail in a clockwise or counterclockwise rotational manner.
